SUMMARY

Full-stack software engineer with hands-on experience shipping production SaaS end-to-end. Strong across React, React Native, Node.js, and Python/FastAPI, with practical experience integrating LLMs, payment systems, and cloud infrastructure on AWS, GCP, and Cloudflare. Background in application security and independent vulnerability research.

EXPERIENCE

Founder & Full-Stack Engineer, Milani Labs

2023 – Present

Solo-operated software company building and operating multiple production SaaS products

Alimi.ai — AI-Powered Website Generation Platform (live, paying customers)

- Built a production pipeline that uses the Claude API to generate complete React + Vite codebases tailored to three package tiers (landing pages, multi-page sites, e-commerce stores).
- Engineered an automated deployment pipeline: Stripe payment → AI code generation → GitHub repo creation → GitHub Pages deployment → Cloudflare DNS configuration, with Playwright-based browser automation for domain registrar operations.

Mamnoon.ai — Cross-Platform Video Calling with Real-Time Translation (iOS App Store + Google Play)

- Built a production React Native app with WebRTC P2P video calling, custom signaling, and a FastAPI/Python REST API handling authentication, session orchestration, and Stripe subscription lifecycle.
- Integrated Azure Cognitive Services for speech-to-text, real-time translation, and text-to-speech across 50+ languages.

Centrix.Email — Pay-Per-Send Email Marketing SaaS

- Built a serverless architecture on AWS Lambda + API Gateway + DynamoDB; implemented security hardening including CSV validation, formula injection prevention, rate limiting, and AWS Cognito auth.

CSV Cleaner — Privacy-First Email List Cleaning Tool (GDPR-compliant)

- Designed a privacy-first architecture where user data never touches the server; client-side processing only. Backend on Cloudflare Workers for globally distributed low-latency operation.

Freelance Security Researcher, Bugcrowd

Jan 2024 – Oct 2024

- Performed independent security testing on client web applications against OWASP Top 10 and platform-specific threat models; documented findings in structured technical reports with severity ratings, reproduction steps, and remediation guidance.

Freelance Web Developer, Rossi Mission SF

Nov 2024 – Dec 2025

- Designed and built a custom React e-commerce site with Google Apps Script back-end for a San Francisco art gallery; shipped iterations and provided ongoing support over a 14-month engagement.

TECHNICAL SKILLS

- **Languages & Frameworks:** JavaScript/TypeScript, Python, HTML/CSS, SQL; React, React Native, Node.js/Express, Python/FastAPI, Tailwind CSS, Vite
- **APIs & Real-Time:** RESTful APIs, GraphQL fundamentals, WebSockets, WebRTC, Stripe, Claude API, Azure Cognitive Services, GitHub API
- **Cloud, Infrastructure & Databases:** AWS (Lambda, DynamoDB, S3, Cognito, API Gateway, SES), GCP, Firebase/Firestore, Cloudflare (Workers, Pages, DNS), Railway, PostgreSQL, Supabase
- **Mobile & DevOps:** iOS/Xcode, Android Studio, App Store + Google Play release lifecycle, Git, CI/CD, Docker, PM2, Playwright

EDUCATION

B.S. Computer Science, San Francisco State University (Minor: Information Systems)

2023

A.S. Application Security, Merritt College

2023
