PROFESSIONAL SUMMARY

Full-stack engineer with four years of production experience designing, building, and shipping scalable systems. Proven expertise delivering end-to-end solutions spanning frontend, backend, cloud infrastructure, and AI/LLM integration. Experience translating business requirements into technical architecture and shipping features that scale across multi-tenant environments.

TECHNICAL EXPERIENCE

Senior Engineer / Technical Lead — Independent Projects2023 – Present

New York, NY

- Architected and implemented AIME Post, a production multi-tenant SaaS platform handling OAuth-managed account authorization across six major platforms with scheduled distribution and server-side video composition. System processes thousands of requests daily with zero-downtime deployments.
- Designed and deployed Alimi.ai, an AI-driven website generation system integrating Claude API with production error handling, streaming output, and scalable content delivery across multiple customer accounts.
- Built Baleh, a real-time translation video calling platform with integrated CRM and booking system, coordinating multi-protocol API integrations (WebRTC, translation services, database synchronization) in a stateful, low-latency environment.
- Delivered custom e-commerce and operations platforms for enterprise clients, managing requirements gathering, technical scope definition, implementation, testing, and production deployment. Systems handle payment processing, multi-language support, inventory management, and data integrity constraints.
- Owned full stack: requirements analysis, architecture design, implementation, infrastructure deployment, monitoring, and production support. Worked with non-technical stakeholders to translate business needs into technical specifications.

Software Engineer / Architect2013 – 2023

Full-stack development across multiple technical domains

- Completed B.S. in Computer Science and A.S. in Application Security. Maintained active development practice while pursuing formal education.
- Built production systems spanning e-commerce, operations automation, client management, and data processing pipelines.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, HTML/CSS

Frontend: React, Next.js, React Native/Expo, Tailwind CSS, responsive design, accessibility

Backend & API Design: Node.js, Hono, REST API design, serverless architecture, background jobs, event-driven systems

Cloud & Infrastructure: Cloudflare Workers/D1/R2/KV/Pages, AWS Lambda/DynamoDB/S3/Cognito, GitHub Actions, CI/CD pipelines

AI/LLM Integration: Production Claude and OpenAI API integration, structured output, streaming, prompt engineering, vision and document processing

Third-party Integrations: OAuth 2.0 (social platforms, Google, Stripe), payment processing, transactional email, webhooks, API coordination

Databases: SQLite, PostgreSQL, DynamoDB, multi-tenant schema design, data isolation, migrations

Software Patterns: Scalable architecture, asynchronous processing, error handling and resilience, monitoring and observability

KEY ACHIEVEMENTS

- Shipped production multi-tenant SaaS systems handling millions of API calls with reliable performance and security guarantees.
- Designed and implemented OAuth authorization flows across multiple platforms at scale, managing token lifecycle and permission models.
- Built AI-integrated systems handling real-time processing with production error handling and graceful degradation.
- Maintained zero-critical-incident track record across all deployed systems. Implemented comprehensive monitoring, logging, and incident response.

- Translated complex business requirements into scalable technical architecture and delivered on-time, within scope.

EDUCATION

B.S., Computer Science — San Francisco State University, 2023

A.S., Application Security — Merritt College, 2023
